Review Comments

1. The paper provides a useful taxonomy distinguishing document extraction, forensic detection, and cause attribution. Strengthen review traceability by stating search dates, source-selection procedures, and coding criteria, while maintaining the stated non-exhaustive scope.

2. Clearly separate BillGuard's document-level detection results from its unvalidated field-level cause attribution. Explain calibration and pair-preserving dataset splits, improve the readability of Table I and reference formatting, and retain all authors' email IDs in the camera-ready manuscript.
